

Welcome to Saxon Technologies

Welcome to Saxon Technologies

Established in 2002, Saxon Technologies soon became associated with quality and superior customer satisfaction.

Saxon Technologies was started by Steven Smith, who was also the founder of Saxon Engineering in the UK, which is still a very successful company servicing major corporations, for example fuji seal, delphi; as well as medical and military outlets.

We have utilized this experience and our quality procedures to form Saxon technologies in Houston. We have applied this with a high skill base to service our customers with competitively priced products that are manufactured with pride and without compromise.

Our growth rate has been a testament to our objectives allowing us to offer a good rate of pay to our employees and in turn getting the highest quality machinists available, enabling the efficiency and accuracy to benefit to our customers without delays.

In 2012 Saxon technologies secured a second location for expansion with a further investment in quality control with the latest CNC CMM as well as several more machines.

The benefits of our investment in skilled workforce and high quality machines are now providing our customers with complete turnkey solutions.

A handwritten signature in black ink that reads "Steven Parker Smith".
